02:OUTDOOR

What better way to guide the visitor to where they need to be than the modular Outdoor system, available in both single and double-sided versions with the added guarantee of being highly durable and weather resistant. With its wide range of panels and sizes, it is the ideal system to ensure both visitors and suppliers know their way. Outdoor is aesthetic and light, yet as strong as steel.

In its Outdoor range, Alu-Sign has come up with an extensive range of panel profiles and sizes, ranging from 46 mm through to 60, 100, 150 and 250 mm with inserts from 4 mm to 8 mm. The all-climate weather resistant panels are supplied either in a mill finish, anodised or power coated.

Alu-Sign's Outdoor design solution consists of flat panels with square or rounded posts and aluminium or plastic end caps.

The text panels are available either single or double-sided with variable corners.

Our Latest product is a post which can be used with our Indoor system as text-panel in combination with Aluminium sheets or plexiglass with or without LED Technology.

Covers all your outdoor needs

Availability is no problem since we keep a stock of the complete range of profiles which can be supplied either with a mill finish, anodised or power coated. Easy installation is the key – the Outdoor system comes with four supports, a 60 mm - a 90 mm - a square 80 mm and a Post Led Profile.

The text panels are affixed to the posts using our patented clam system.

Visibility, legibility, all-round accessibility
